

the next generation of energy-saving control

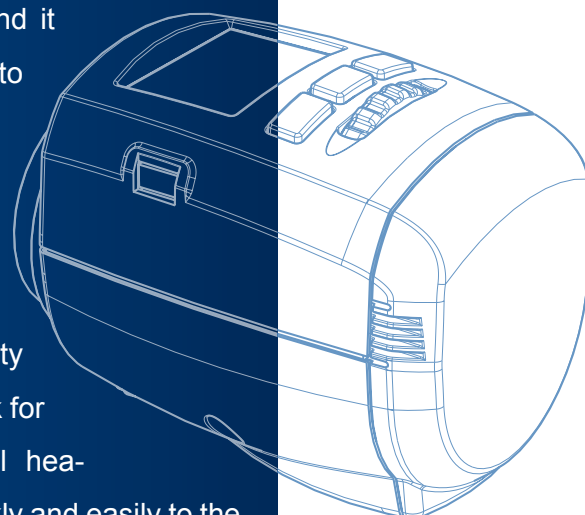

- smaller than a regular thermostatic head
- battery life approx. 5 years
- nearly noiseless gear
- easy handling with handwheel
- easy to install due to the snap-on adapter
- automatic frost protection
- "open window" detection
- 8 individually programmable switch points a day
- convenient programming with the PROGmatic
- fits all common radiator valves, e.g. Heimeier, Honeywell MNG, Honeywell Braukmann, Danfoss etc.

Our new device *comet* is nearly noiseless, the battery life is significantly longer and it is smaller than a regular thermostatic head. Due to the improved menu structure and the newly created snap-on adapter system, the *comet* is intuitive to use and it is even faster and easier to install.

You also have the possibility to use our *PROGmatic* stick for transferring your individual heating- and saving-times quickly and easily to the *comet*. Simply connect PROGmatic to your PC. Using the software stored on the stick, you can define your heating and saving times. Then you insert your PROGmatic device into your energy-saving controller to copy the individual room profile created on your PC.
